## Neutralizer Nu-Well 600 pH Neutralizing Agent

## Description

Neutralizer is a food grode, powdered alkali (base) designed for the neutralization of acidic solutions while limiting the generation of hormful vapors or byproducts.

## Application

Neutralizer reacts spontaneously with acid solutions, raising the overall pH of the solution. The reaction of Neutralizer and an acid produces a salt and carbonic acid, which readily decomposes to carbon dioxide and water as the final reaction products. When the bubbling stops, the reaction is complete and the acid solution can be disposed of. Keep the area well ventilated during the neutralization process.

1. Dissolve Neutralizer in a holding vessel with water
2. Add the acidic solution slowly into the vessel until the fizzing stops
3. Discharge to an approved outlet
4. If additional neutralization is needed, blend Neutralizer with water and slowly add it into the vessel, limiting splashing

## Physical properties, shipping and handling

Appearance: White to opaque coarse crystal
Density: Approximately 70 lb ./ft. ${ }^{3}$
pH (as shipped): 8.3 at $77^{\circ} \mathrm{F}$

- Odorless, has a bitter, salty taste
- Highly soluble in water, can be separated from water through evaporation
- Decomposes at temperatures above $50^{\circ} \mathrm{C}$
- CAS No. 144-55-8
- Available in 50 lbs . containers

## Amount of Neutralizer needed to neutralize acid removed from well

| Batch <br> Volume (gal.) | Batch <br> Volume <br> $(\mathrm{l})$ | For <br> Nu-Well 130 <br> $(\mathrm{lbs})$. | For <br> Nu-Well 130 <br> $(\mathrm{~kg})$ | For <br> Nu-Well 120 <br> $(\mathrm{lbs})$. | For <br> Nu-Well 120 <br> $(\mathrm{~kg})$ | For <br> Nu-Well 110 <br> $(\mathrm{lbs})$ | For <br> Nu-Well 110 <br> $(\mathrm{~kg})$. |

| 1000 | 3800 | 220 | 100 | 684 | 312 | 652 | 297 |

*This table assumes standard acid treatments were used.

## Example

Neutralize a 1,000 gal. tank with discharge of an acid solution of Descale Heavy NW-130

## Step 1

Dissolve 220 lbs. of Neutralizer in enough water to form a solution

## Step 2

Pump acid from well into the holding tank and hold until fizzing stops and the water is neutral

## Step 3

Discharge in accordance to local regulations
